FRONTEND AUDIT · 5 SEPTEMBER 2026

What *design-os* specified, and what the app actually ships

The `design-os/` folder names 30 routes across Phase 3's sitemap and blueprints 27 of them in Phase 4, composed from Phase 5's 70 reusable sections. Every one of those routes was checked against the App Router tree and the section components that render it. The headline: the portals overshoot the spec considerably, and the gaps concentrate in three places — anything geographic, anything that moves a file, and the depth of the offer workflow.

15	13	2	8	7
Built to spec	Built, modules short	Never built	Beyond spec	Linked, nonexistent

Ship-blocking first TWO DEFECTS, NOT SPEC DRIFT

These are not disagreements with the blueprint. They are links the app renders today that resolve to the 404 page.

Seven routes are linked from the site chrome but do not exist

The footer renders three link columns and the public header renders a primary nav; between them they point at seven paths with no `page.tsx`. **/about** and **/contact** sit in the primary navigation on every public page. **/privacy** and **/terms** are additionally referenced from `AUTH_ROUTES` in `lib/constants.ts`, so the signup consent copy links to them too. design-os names About, Help, Blog, Privacy and Terms as footer content in Section 48 but never blueprints them as pages — so the spec is complicit here, and the fix is a decision about scope, not just a missing file.

`/about` `/blog` `/contact` `/help` `/privacy` `/terms` `/accessibility`

`components/layout/footer.tsx` `lib/config/site-nav.ts`

The Quick Actions panel is written, exported, and imported nowhere

`components/features/shared/quick-actions.tsx` is dead code — no file imports it. It is also precisely the module design-os asks for three times: Page 8 module 5 (buyer dashboard "Quick Links"), Page 15 (agent dashboard "Quick links") and Page 20 module 7 (admin overview "Manage Users · Review Listings · Process Verifications · View Reports"). All three pages currently render without it. One component, three unfilled slots.

Route ledger 30 SPECIFIED · 36 PAGE ROUTES BUILT

Grouped as the Phase 3 sitemap groups them. The delta column names the specific Phase 4 modules or Phase 5 sections that are absent — not a general impression.

PUBLIC BROWSE 0 to spec · 3 short · 1 missing

◐ `/` PAGE 1 · HOME	Hero search, featured grid, trust signals, latest sales and CTA banner all present. The spec's **"How It Works — 4 steps: Search → View → Offer → Close"** is answered by the Concierge scroll-narrative instead, which is a different idea rather than a missing one. Genuinely absent: the **newsletter signup in the footer** exists as a component but the "Latest Sales" module is specified as a **map of recent closed listings** and ships as a card row.
◐ `/search` PAGE 2 · SEARCH RESULTS	Filters, result count, sort, grid, pagination and empty state all conform. Two deltas: module 5 **Map View toggle** is not built — the view toggle switches Grid / List, not Grid / Map; and Section 35 **Price Slider** ships as discrete option chips with facet counts.
◐ `/listing/[id]` PAGE 3 · LISTING DETAIL	Gallery, sticky price bar, key facts, description, comparables, agent card and sticky mobile CTA bar all conform, and the page adds JSON-LD and a lightbox beyond spec. Module 5 **Neighborhood Section** is the gap: Section 10 asks for a map with school / transit / park / restaurant markers and a toggleable legend; `listing-neighborhood.tsx` renders a walk-score stat trio and a "detail released with the dossier" note.
✕ ~~`/map`~~ PAGE 4 · MAP VIEW	**Not implemented at any level.** There is no route, and no mapping library of any kind in the dependency tree — no Google Maps, Mapbox, Leaflet or react-map-gl. This is the single largest spec-to-code gap, and it is why `/search` and the listing neighborhood section are also short: all three depend on the same unmade decision about a map provider.

AUTHENTICATION 1 to spec · 2 short · 1 missing

◐ `/signup` PAGE 5 · SIGN UP	Email, password, persona selection (Buyer / Agent / Seller) and social OAuth are all in place. Missing from the blueprint: the **OTP verification step** (six-digit code), the **password strength meter**, and **Facebook** — only Google and Apple marks are wired in `provider-marks.tsx`.
• `/login` PAGE 6 · SIGN IN	Email, password, forgot-password link, social OAuth and the sign-up link all present.
◐ `/reset-password` PAGE 7 · RESET PASSWORD	Implemented as a **tokenised email-link flow** (request → emailed link → set new password). The blueprint specifies **OTP verification** as the middle step. This is a defensible modern substitution rather than an omission, but it is a divergence the spec has not been updated to record.
✕ ~~`/verify-email`~~ PHASE 3 SITEMAP	Listed in the Phase 3 sitemap under (AUTH) but never blueprinted in Phase 4 and never built. No route, and no `verifyEmail` reference anywhere in the codebase. Consistent with signup having no OTP step — the whole email-verification path is unbuilt.

BUYER PORTAL · /DASHBOARD 5 to spec · 2 short · 2 beyond

◐	`/dashboard` PAGE 8 · OVERVIEW	Quick stats, recent activity feed and upcoming viewings conform, plus a Next Steps rail and an offer hero beyond spec. Modules 4 and 5 are absent from the page: **New Alerts** (triggered price alerts, new matches) and **Quick Links**. Alerts live on their own route instead of surfacing here.
•	`/dashboard/saved` PAGE 9 · SAVED LISTINGS	Filter bar, sort, remove-save and empty state all present. Rendered as a dense table rather than the spec's card grid — a deliberate call under the project's application-register density rule, not a shortfall.
•	`/dashboard/offers` PAGE 10 · MY OFFERS	Status filter, offers table and a full detail route with timeline, counter panel, comparison columns and an agent message thread.
•	`/dashboard/viewings` PAGE 11 · VIEWINGS	Month calendar in the rail, upcoming table, past ("walked") viewings, reschedule and cancel.
◐	`/dashboard/messages` PAGE 12 · MESSAGES	Conversation list, thread, typing indicator and composer all present. The composer is **text-only** — Section 23's attach control and Section 25's Document Share are both unbuilt, so no file ever moves through a conversation.
•	`/dashboard/alerts` PAGE 13 · ALERTS	Per-type alert preferences with channel toggles, plus alert history.
•	`/dashboard/settings` PAGE 14 · SETTINGS	Profile with photo upload, communication preferences, privacy controls, change password, download data and delete account.
+	`/dashboard/interests` NOT IN DESIGN-OS	Enquiry / connection tracking between saving a listing and making an offer.
+	`/dashboard/transactions` NOT IN DESIGN-OS	Escrow holds and settlements for the buyer, with a Stripe checkout and release-escrow flow. The spec gives transactions to admin only.

AGENT PORTAL · /AGENT 3 to spec · 4 short · 4 beyond

◐	`/agent` PAGE 15 · AGENT DASHBOARD	Route renamed from the spec's `/agent/dashboard`. Pipeline overview, recent leads, upcoming showings, stage list and recent sales all present; the **Quick links** module is not.
•	`/agent/listings` PAGE 16 · LISTINGS	Status filters, sortable table with views / saves / offers, bulk actions and selection, plus create and edit routes beyond spec.
◐	`/agent/leads` PAGE 17 · LEADS	Built, but on a **different taxonomy**. The spec calls for status New / Contacted / Qualified / Lost with hot / warm / cold scoring; `lib/config/lead-tones.ts` defines pending / accepted / declined with no scoring dimension. The message and call affordances the spec asks for are present.
◐	`/agent/pipeline` PAGE 18 · PIPELINE	The four CRM columns match the spec exactly (Leads → Offers → Pending → Closed) and a health panel is added. But the board is **read-only**: Section 42's **drag-to-change-status** and the per-deal detail modal are not implemented, so a deal's stage cannot be advanced from this screen.
◐	`/agent/calendar` PAGE 19 · CALENDAR	Month, week and day views, a mini-calendar and appointment type mix are all present. Missing: the **Create event** action and **Google Calendar sync**. The agent can read the schedule but not write to it here.
•	`/agent/analytics` PHASE 3 SITEMAP	Named in the sitemap and the agent nav model; never blueprinted in Phase 4. Built with production hero, monthly table, quarter list and benchmark comparison.
•	`/agent/settings` PHASE 3 SITEMAP	Named in the sitemap; never blueprinted. Built with profile strength, credentials, notification rules and security controls.
+	`/agent/requests` NOT IN DESIGN-OS	Inbound viewing and offer requests awaiting the agent's response.
+	`/agent/concierge` NOT IN DESIGN-OS	VIP client servicing — allocation, practice list, service rows. Its own nav group in `agent-nav.ts`; entirely absent from the spec's agent navigation model.
+	`/agent/listings/new` NOT IN DESIGN-OS	Multi-panel listing composer (identity, media, lifecycle, extras). The spec names an "Upload Listing" button and a "Create Listing" dialog but never blueprints the form.
+	`/agent/listings/[id]/edit` NOT IN DESIGN-OS	Same composer in edit mode, with a delete-confirmation modal.

ADMIN CONSOLE · /ADMIN 6 to spec · 2 short · 1 beyond

◐	`/admin` PAGE 20 · ADMIN OVERVIEW	Seven of eight modules present and several exceeded — volume stat grid, revenue panel, system alerts, revenue breakdown, moderation queue and system health, plus integration health and an audience mix beyond spec. Module 7 **Quick Actions** is the one omission (see the defect above).
•	`/admin/listings` PAGE 21 · MODERATION	Filter pills with counts, sortable selectable table with totals footer, row-reveal detail panel, bulk action bar, and the Section 64 decision modal with its required-note gate.
•	`/admin/users` PAGE 22 · USER MANAGEMENT	Full Section 65 table with role chips, tier colour, suspend / reactivate, bulk bar, plus a create-user modal and a per-user profile route beyond spec.
•	`/admin/transactions` PAGE 23 · TRANSACTIONS	Summary stats, Section 66 ledger with commission chips and totals footer, milestone list and a deal review modal.
•	`/admin/payments` PAGE 24 · PAYMENTS & REVENUE	Revenue stats, monthly chart, breakdown, and payout processing with a stage table.
•	`/admin/reports` PAGE 25 · ANALYTICS & REPORTS	Headline stats, region performance with rank and share meters, user and tier breakdowns, and an export modal.
•	`/admin/verifications` PAGE 26 · TIER VERIFICATIONS	Section 67 queue with status-dependent actions, document list, review pane and decision modal.
◐	`/admin/settings` PAGE 27 · SYSTEM SETTINGS	Platform and Marketplace panels carry nine of ten specified fields, the saved callout and reset both work, and an audit-log table is added beyond spec. Three gaps: **Reporting Timezone** is missing from the platform fields; `PolicySwitchId` defines only **two of the eight** specified toggles (`maintenance-mode`, `open-signups`) — the whole Moderation Policy group and half of Operations are unbuilt; and Section 70's **Maintenance Panel** of destructive actions does not exist.
+	`/admin/users/[id]` NOT IN DESIGN-OS	Per-user profile console with account list, suspension history and focus metrics.

Section-level gaps PHASE 5 · 70 PATTERNS

Patterns the blueprint specifies that no component in the tree fulfils, or fulfils only partly.
These are the reusable causes behind several of the route deltas above.

§	PATTERN	STATE	WHAT IS THERE INSTEAD
10	**Neighborhood Map**	ABSENT	A walk-score / days-on-market / saves stat trio and a schools note. No map, markers or legend.
16	**Offer Form**	PARTIAL	Amount and free-text terms only. No move-in date picker, no contingency checkboxes (inspection / appraisal / financing), no earnest-money field, no review-summary step before submit.
21	**Inspection / Appraisal Tracker**	ABSENT	An inspection window exists inside the escrow model, but the post-acceptance checklist of dated milestones with document upload never appears on offer detail.
25	**Document Share**	ABSENT	No document card, viewer, download or share anywhere in messaging or offers.
35	**Price Slider**	SUBSTITUTED	Discrete price-band chips with live facet counts. Arguably better for this catalogue; the spec has not been updated to say so.
38	**File Upload**	PARTIAL	Two plain `<input type="file">` controls (profile photo, listing media). No drag-drop zone, no upload progress bar, no stated type or size limits.
42	**Pipeline Card (drag)**	PARTIAL	Cards render in stage columns but carry no drag handle and no drop targets.
70	**Maintenance Panel**	ABSENT	Admin settings ends at the policy table; no separated destructive-action panel.

Reading the ledger

01 **The spec is now the smaller document.** design-os blueprints 27 pages from 70 sections; the app ships 36 page routes composed from 206 section components, 269 feature components, 47 primitives and 33 patterns. In the admin console especially, the built screens exceed their blueprints in almost every module. Treating design-os as the authority would mean deleting good work — the honest read is that it has fallen behind the code and needs a Phase 4 revision, not that the code has drifted.

02 **One unmade decision explains three gaps.** `/map`, the search Map toggle and the listing Neighborhood section are all blocked on the same thing: no map provider has been chosen or installed. Picking one closes a whole column of this ledger; leaving it open keeps the public surface permanently short of its blueprint.

03 **Nothing in the app moves a file between two people.** No message attachment, no document share, no drag-drop upload, no document step on an accepted offer. For a marketplace whose spec has buyers and agents exchanging inspection reports and appraisals, this is a coherent functional hole rather than four unrelated misses.

04 **Two screens read but cannot write.** The agent pipeline shows stages without letting an agent change one; the agent calendar shows a schedule without letting an agent add to it. Both are presentation-complete and interaction-incomplete, which is the failure mode most likely to be mistaken for "done".

05 **Divergences worth ratifying, not fixing.** The saved-listings table over a card grid, price chips over a slider, token-link password reset over OTP, and the Concierge narrative over a four-step "How It Works" all look like considered decisions. They are only problems because the spec still says otherwise. Amending Phase 4 and 5 to record them would shrink this ledger by four rows without touching a line of code.

`30 specified routes · 36 built  15 conform · 13 short · 2 unbuilt  8 beyond spec · 7 dead links`
